
BRENTFORD LOCK ALLOTMENTS, WILLMOTT DIXON

BIODIVERSITY ENHANCEMENT OVERVIEW

We worked with the local allotments to relocate and re-establish allotment areas on an area of land planned for future development, whilst working with the client to establish roof top allotment gardens in a communal access area. Materials from the site that might otherwise have been discarded were used and recycled for temporary allotments, as well as reuse of existing allotment structures and materials. This project will sustain pollinator areas within vicinity of the project's site.

Fact box

Company name:

Willmott Dixon

Project name:

Brentford Lock allotments

Location:

Brentford, London

Biodiversity enhancement:

- Permanent allotments
- Temporary allotments

Size:

N/A

Cost:

N/A

Tips:

Early forward planning of logistics and actions needed, with little cost or project risk, can create short and long term value for the project and local community, that will support biodiversity in the area whilst we're on site and when we've departed.

Year completed:

2014
