WOODGRANGE INFANT SCHOOL, MORGAN SINDALL

BIODIVERSITY ENHANCEMENT OVERVIEW

New extension to the current school comprises new classrooms, toilets, break-out areas and various internal works to upgrade the School. Value of the project is £2.3 million.

Planting boxes have now been constructed and in-filled within the site area to encourage local wildlife and utilise the existing plants which would have simply been disregarded throughout the construction of the new build.

The children will be able to gain experience of planting and maintaining plants and shrubs through these newly installed planters. These will be primarily to encourage bee populations as the population locally to East London is severely low as it is elsewhere in the country
